Fully integrated with AURORAL Cloud

oHA shares data with the auroral cloud, like location based activities for experiences. This enables an open eco system for further applications/innovations on different domains. Furthermore, all data and services are shareable between oHA instances. An API and the oHA Widget-Generator enables easy-to-use data sharing.

Interoperability with oHA by LuxActive

With oHA, many local businesses are bookable for tourists and residents. In public sector, municipalities can offer different services like bookable appointments or annual passes. Both, tourists and residents can book and inform about e-cars, e-bikes and shuttle services. Energy communities are promoted. Monitoring of energy consumption and usage statistics is provided. There exists many further services. Services, like for example, live tour navigation, experience tours with story-telling, weather forecasts, or news with push notification.
